Clearance To Combustible Materials

WARNING: The structure and surrounding objects MUST maintain the specified minimum clearance to combustible materials.

Built-in structures constructed of wood or other combustible materials may require the use of the **OPTIONAL Built- In Heat Shield Kit** to maintain the required clearance to combustible materials. The grill may be supported by either the three support brackets, or the four leveling feet. Please note that there must be at least 3/8" clearance between the bottom of the grill and the structure.

Maintain the clearance to combustible materials as specified below.

The *Memphis Pro* and *Elite* require a 110/120 V AC* supply. The ITC is supplied with a 3-prong grounding plug.

To minimize possible shock hazard, the cord must be plugged into a mating 3-prong ground-type outlet, grounded to conform with the National Electrical Code, ANSI/NFPA latest edition, Canadian Electrical Code (CSA) and all local codes and ordinances.

*European units utilize a 230V power supply.
